

Please replace the paragraph of the abstract on page 23 with the following amended paragraph:

Abstract

~~Electronic transactions~~

A method in a system wherein a user equipment (1) and another party (12) are enabled to exchange transaction data. A data entity is generated, said data entity associating with transaction. Information of an object that associates with the transaction is included in the data entity. The data entity is then transmitted to the user equipment (1) over a wireless interface (11). The user equipment may then request for additional information that associates with the transaction based on said information of the object.
